FOOTNOTES

All information is based upon the most recent data available. Visit the Winnebago web page - www.winnebago.com - for the most current product information.

- The height of each model is measured to the top of the tallest standard feature and is based on the curb weight of a typically equipped unit. The actual height of your vehicle may vary by several inches depending on chassis or equipment variations. Contact your dealer for further information.
- Capacities are based on measurements prior to tank installation. Slight capacity variations can result upon installation.
- Actual towing capacity is dependent on your particular loading and towing circumstances which includes the GVWR, GAWR, and GCWR as well as adequate trailer brakes. Refer to the chassis operator's manual of your motor home for further towing information.
- The load capacity of your motorhome is designated by weight, not by volume, so you cannot necessarily use all available space when loading your motorhome.
- Capacities shown are tank manufacturer's listed water capacity (W.C.). Actual filled LP capacity is 80% of listing due to overfilling prevention device on tank.
- See separate chassis warranty.
- Sleeping capacity is the maximum based on a specific floorplan.

Winnebago's® continuing program of product improvement makes specifications, equipment, model availability, and prices subject to change without notice.
